

# P300

*The P300 is a self-sharpening cutting edge specially designed for snow/ice clearing and gravel planing. Its unique lightweight design insures maximum strength and a constant renewal of the scarifying edge.*

The P300 attaches easily with the "Quick Mount System", which secures the P300 tightly with wedges. This system allows for quick and painless roadside replacement, keeping down time to a minimum.

Furthermore, the blade's minimal contact surface readily slices packed snow and ice. This trait also helps the P300 reduce wear on the finish of roads. As the blade wears, there is always another row of cutting edges waiting to meet the challenge ahead.

Creighton Rock Drill Ltd. invites you to stop by our shop for a closer look at this innovative new product.

## Technical Data

### Material

Specially treated boron alloyed steel

### Hardness

500 Brinell

### Thickness

11 mm (<sup>7</sup>/<sub>16</sub>"

### Blade Height

240 mm (<sup>9</sup>/<sub>16</sub>"

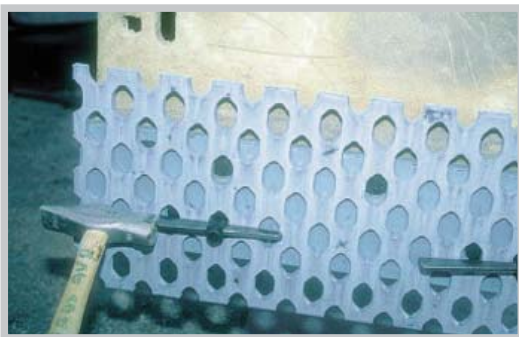

### Length

792 mm (2.6')

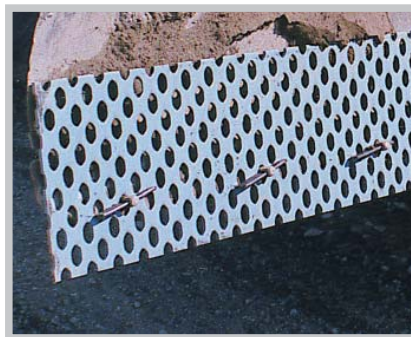

915 mm (3')

1220 mm (4')

1525 mm (5')

*Attaching the P300 with the "Quick Mount System" is a snap.*

*Once properly attached, the P300 is a tough and efficient blade.*
