

Hydraulic Breakers

The Light Breaker Range

(SB 50, SB 100, SB 150, SB 200, SB 300, SB 410, SB 450)

These breakers are stronger, lighter, & more maneuverable than most breakers because the integral parts are made from a single casting, thereby providing a higher power-to-weight ratio.

The Medium Breaker Range

(MB 500, MB 800, MB 1000, SB 1200, SB 1700)

Breakers in this range feature advanced percussion mechanisms, which greatly reduce unavoidable vibrations. They are both versatile & robust.

The Heavy Breaker Range

(HB 2200, HB 3000, HB 4200, HB 5800, HB 7000)

Maximum power & performance are key to the breakers featured in this range. They excel in durability & have optimized energy conversion / smooth running, & a constant impact energy regardless of the oil flow rate from the carrier.
